Experiment -1

AIM: To create an AWS free tier account to provision the resources.

Description:

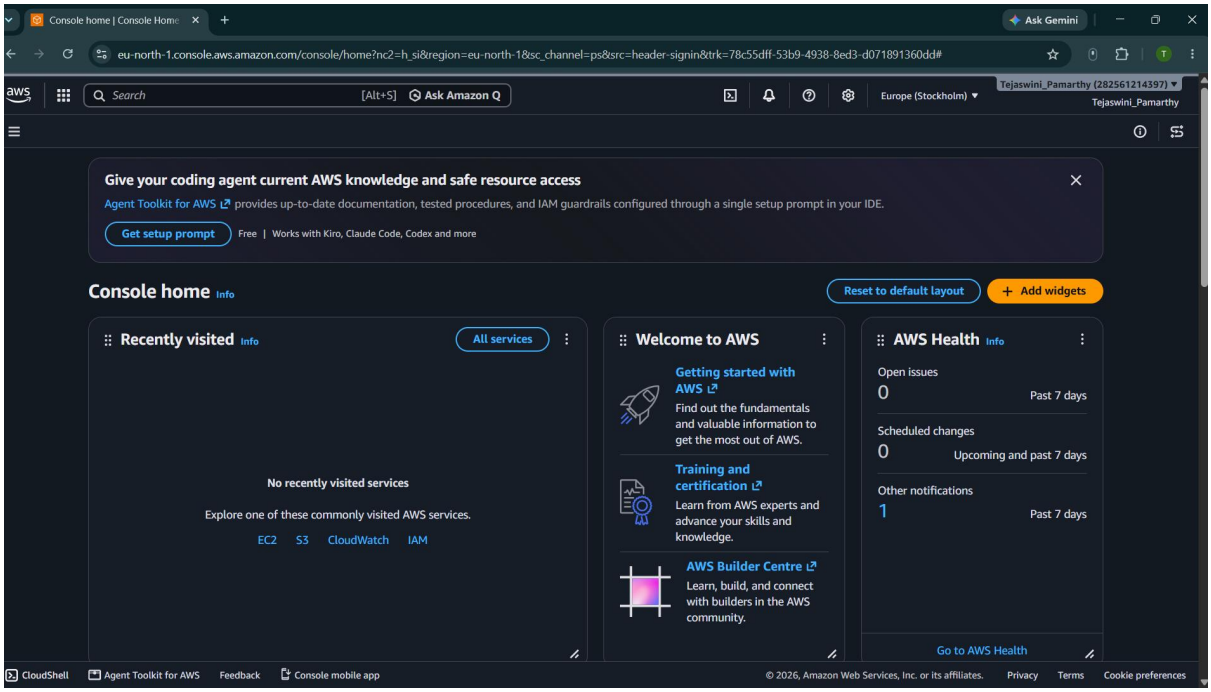

Amazon Web Services (AWS) is a cloud computing platform that provides various services such as computing, storage, databases, and networking over the internet. It allows users to create and manage cloud resources without maintaining physical hardware.

An AWS Free Tier account provides access to selected AWS services and resources within specified usage limits. It helps users explore AWS services, understand cloud computing, and perform practical experiments. By creating an AWS account, users can access the AWS Management Console and provision resources according to their requirements.

Steps:

1. Open a web browser and visit the official AWS website: https://aws.amazon.com/
2. Click on the **Create an AWS Account** option.
3. Enter a valid email address and provide an account name.
4. Verify the email address using the verification code sent by AWS.
5. Create a strong password for the AWS account.
6. Enter the required contact details, including name, address, and phone number.
7. Complete the payment information and identity verification process as requested by AWS.
8. Select the appropriate AWS support plan and Free Tier plan, if the options are displayed.
9. Complete the account registration process.
10. Sign in to the AWS Management Console using the registered email address and password.
11. Explore the AWS Management Console and its available services.
12. Open the AWS Free Tier section to check the services, usage limits, and available free-tier benefits.
13. Select the required AWS service and proceed to provision cloud resources according to the experiment requirements.
